Science Plan

Balloon rockets

Equipment

Straw	Sellotape
Balloons	Squared Coloured paper
Scissors	Pencil

Method

Cut the rolled end of the balloon and place over one end of the straw.

Secure with sellotape so it is air tight

Cut out your fins for the end of the rocket (see pic above) so they are all the same size

Sellotape them into the other end of your straw, leaving about 2cm from the end of your straw (for your mouth)

Decorate your rockets with felt tip pens if you want to!

Blow through the straw to blow up your balloon - put your thumb on the other end of the straw when you've finished so the air doesn't come back out!

To launch your rocket, hold it in the air and then let go!!
