Science Plan

Fake poop

Equipment (Makes about 20 poops)

2 cups / 300g plain flour
2 tablespoons of bicarbonate of soda
1 cup / 8 fl oz of hot water
Measuring jug
Gloves!
1 cup / 300g of salt
2 tablespoons of vegetable oil
Mixing bowl
Brown food colouring / Paint

Method

1. Mix 1 cup / 8 fl oz of hot water with enough paint or food colouring to make a good poo colour

2. Place the flour, salt, bicarbonate of soda and vegetable oil in a large mixing bowl

3. Add your coloured liquid slowly to the bowl of ingredients and mix until you have a firm but flexible dough; if you need a darker colour add more of the colouring agent directly but be careful not to end up with runny poo!

4. Add different dietary evidence to the poo - eg grass, little stones

ALTERNATIVELY

Can create the poop using air dry clay, add bits before letting it dry!
