Science Plan

Fake snot slime

Equipment

½ cup PVA glue
1/2 cup water
1/2 teaspoon baking soda
1 tablespoon contact solution

green / yellow food colouring

Air tight container / bag

Method

STEP 1: Add food colouring to ½ cup of PVA glue as desired.

STEP 2: Stir in 1/2 tsp baking soda

STEP 3: Mix in 1 tbsp saline solution and stir until slime forms and pulls away from sides of the bowl.

We always recommend kneading your fluffy slime well after mixing. Kneading the slime really helps to improve it's consistency.
If your slime still feels too sticky, you may need a few more drops of saline solution. As I mentioned above, start by squirting a few drops of the solution onto your hands and kneading your slime longer. You can always add but you can't take away. Saline solution is preferred over contact solution.
