Science Plan

Floating Ball

Equipment

Coloured card
Straws
Sellotape
Scissors
Glue

Method

1) Draw a circle (use something to draw around) onto the piece of card.
2) (The diameter of the circle should be the width of the a4 piece of paper)
3) Cut out your circle
4) Fold your circle in half and then half again so it is now in quarters.
5) Cut out one of your quarters from your circle.
6) Bring the cut sides of your circle together to make a cone. Secure cone with sellotape (may need to do this with a friend!)
7) Cut a little bit off the pointed end of your cone, just enough to fit the end of the straw through.
8) Secure straw and cone together with sellotape.
9) Decorate your cone with eyes and teeth using different coloured card.
10) Place a scrunched piece of paper or a lightly inflated balloon inside the funnel.
11) Blow through the other end of the straw and watch it float into the air!
