Science Plan

Growing worms

Equipment

Kitchen roll	Scissors
Felt tip pens	Pencil
Pipettes	Water

Method

Cut the kitchen roll into smaller squares (approx 15cm)

Colour the square with felt tips (doesn't have to be neat) on both sides

Wrap the paper tightly around a pencil and while you're still holding it on the pencil, squish the paper down to one end and squash down.

Slide the squashed kitchen roll off the pencil (don't unwrap)

Place on a plate or surface. Drop a few drops of water using a pipette onto your worm and watch it grow!
