Science Plan

Hubble Bubble

Equipment

Plastic cup
Bubble solution and wands (wands can be made with pipe cleaners)
Plastic straws

Method

Turn the plastic cup upside down

Using fingers, create a little puddle of bubble solution on the bottom of the cup (which is now the top!)

Using the wand, children need to blow a large bubble and carefully place it on the top of the plastic cup (where the puddle is)

Wet one end of the plastic straw in the bubble solution

Carefully push the straw into the bubble without popping it!

Blow a smaller bubble inside the large bubble

Children could even try and push the straw into the smaller bubble and blow another one!
