Science Plan

Slime

Equipment

½ cup PVA glue
1/2 cup water
1/2 teaspoon baking soda
1 tablespoon contact solution
3 cups of shaving foam
food colouring
Small bowl
Air tight container / bag

Method

STEP 1: Add 3 cups of foam shaving cream to a bowl.
STEP 2: Add food colouring as desired.
STEP 3: Mix in a 1/2 cup of PVA glue
STEP 4: Stir in 1/2 tsp baking soda
STEP 5: Mix in 1 tbsp saline solution and stir until slime forms and pulls away from sides of the bowl.
STEP 6: Add some glitter etc!

We always recommend kneading your fluffy slime well after mixing. Kneading the slime really helps to improve it's consistency.
If your slime still feels too sticky, you may need a few more drops of saline solution. As I mentioned above, start by squirting a few drops of the solution onto your hands and kneading your slime longer. You can always add but you can't take away. Saline solution is preferred over contact solution.
